(a) SNR for 50% detection
excess power, predicted
matched filter, Rice estimate
excess power, measured
matched filter, measured
ρ_{50} at 1 false alarm/yr
decay time τ [s]
(b) onset time, glitches found at $\rho \geq 10$
excess-power centroid, $|\hat{t} - t_0|$ (median, 90%)
matched-filter seed, $|t_0^{\mathrm{seed}} - t_0|$ (median, 90%)
heterodyne tolerance (inference paper)
onset error [s]
decay time τ [s]
